

ABSTRACT

IN-SITU CELL EXTRACTION AND ASSAY METHOD

5

Subt
i) A method of assaying for an analyte comprises the steps of:
mixing a sample of cells possibly containing the analyte with
a cell lysis reagent to provide a cell lysis fluid,

10

ii) mixing the cell lysis fluid with reagents, including a specific
binding partner of the analyte for binding to the analyte, for performing a
specific binding assay for the analyte,

15

iii) and mixing the cell lysis fluid with a sequestrant for the cell
lysis reagent, whereby the binding of step ii) is performed in the presence
of the sequestrant.
